The Illinois Natural History Survey Traveling Science Center made its way Tuesday to Hopkins Park in Granville. The 320-square-foot mobile classroom features informative, engaging exhibits on biodiversity and natural resources.

Visitors learned about the types of habitats and species diversity of their

region, as well as ways to combat against threats to that diversity.

Since 2006, the center has held more than 150 community events and public events while providing structured school programs for over 100 students each year.

Sponsors were North Central Granville National Bank, Granville Orchard & Produce and First Credit Union.
